

**DIN 24960
(EN 12756)**

Working conditions

Mechanical seals types V111B are designed both for light and hard working conditions, for the pressure up to 25(40) bar ($p= 25(40)$ bar) and temperatures from minus 40°C to 204°C ($t= -40^{\circ}\text{C} \sim +204^{\circ}\text{C}$). This Type of mechanical seal is especially suitable for following mediums: cold and hot water up to 130°C, demineralized water, wastewater, beer, beer mash, malt, milk and diary product, vegetable oil and vegetable paste, alcohol, calcium carbonate, dextrose, juice and natural juice, mild acid, mild alkal (base), diesel, petrol, heavy oil, mineral oil, varnish and colors, ammonia (NH₃).

Design and constructive characteristics

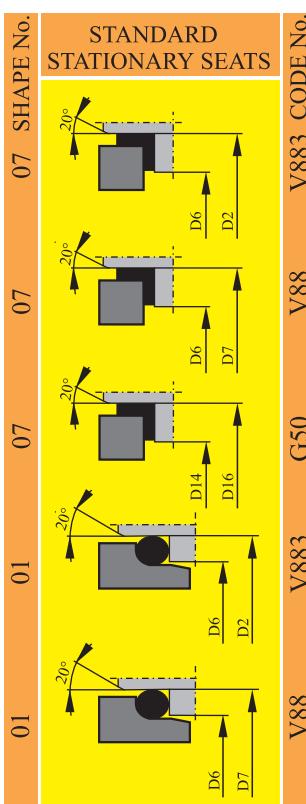

Design of V111B type is very similar to the V111/V111A, but here successfully over coming higher pressures is achieved by the sliding faces balancin. It can be built into both DIN 24960 standard (EN 12756) and shorter measurements out of DIN 24960. The openconstruction type flushes and lowers down the blocking attempt due to crystallization. The rotary part is extremely flexible, and suitable for most applications.

LIMITING FACTORS

$D_1 = 20 \dots 80\text{mm}$
 $p_1 = 25(40) \text{ bar}$
 $t = -40 \dots 204^{\circ}\text{C}$
 $V_g = 20 \text{ m/s}$
 $pV = 250 \text{ bar m/s}$

LIST OF ELEMENTS

1. Rotary seal ring
2. Stationary seat
3. Secondary stationary seal - O - ring
4. Secondary rotary seal O - ring
5. Single coil spring
6. Housing
7. Rotary seal ring carrier
8. Fixing and driving screw
